                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               discovery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bonaldo, M.F., Lennon, G. and Soares, M.B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative fixed (31.4732.14) gg/aff23972 l), a capy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector (NA, and transformed into chemically-competent F coll XLIO-Gold (Stratagone) cells and selected for ampioillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bromedical Polymers Research Bilder, 20 a. 2030 b.,

                                                                                                                                                                                                                                                                        The sequence represents a fradment of a human high-affinity molatonin-la receptor, which is a membrane protein, coupled to quantine nucleotide binding proteins (6-proteins), with 7 hydrophobic putative transmembrane domains. The full-length sequence is given in RB812. Receptor fragments which interact with molatonin, or specific antibodies, may be used as receptor adomists or receptor-antagonists. Appnists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic unimal for use as a model system to screen agenists and antagonists.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-DEC-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   receptor-agonists or receptor antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night eyels disorders, to central ovulsation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 putative transmembrane domains. A partial sequence is given in R88411. The N-terminus contains 2 consensus N-glycosylation sites, compared to 1 site in the Xenopus receptor (R88409), and the C-terminal tail is 65 amino acids shorter. Receptor fragments which interact with melatunin, or specific antibodies, may be used as reconstructions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            receptor, which is a membrane protein, coupled to quanine nucleotide binding proteins (G-proteins), with 7 hydrophobic nucleotide binding proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   07-JUN-1995:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the human melatonin receptor protein. The DNA encoding this sequence is used in an expression vector designated pakkor-hweir? The expression vector is used to produce the chinese hamster ovary (CHO) cells of the invention. The CHO cells express the human melatonin receptor protein, and can be used to identify compounds (such as agonists and antagorists) having affinity to the receptor. The CHO cells can also be used to produce the receptor. The melatonin receptor agonist can be used as an agent for preventing or treating jeting, steeplessness, seasonal melancholia, Alzheimer's disease, dementia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Melatonin receptor protein.

                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This represents a human melatonin receptor mel-la. The invention provides materials for screening for a substance showing affinity for a melatonin receptor protein, which comprises an animal cell containing an expression plasmid for the gene encoding a human melatonin receptor protein. The cells are useful for screening for human melatonin receptor proteins and its agonist or antagonist e.g. hormones and synthetic proteins and its aconist or antagonist e.g. hormones are combinent.
                                                                                                                                                                                                                                                                                                                                                                                                       hyman melatodic receptor protein is useful as it has the same activity natural human melatodic receptor protein. The new screening method is better than prior att radioimmunoassay techniques at quantitatively determining melatonic, which uses antibodies produced by linking melatonic to a carrier.
                                                                                                                                                                                                                                                                                                                                                                          sequence

Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breading animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 9; Fig 3; 115pp; English

         receptor, which is a membrane protein, coupled to quanine nucleotide binding proteins (G-proteins), which Thydrophobic putative transmembrane domains. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agenists or receptor-antagonists. Agenists may be used in therapy of circulain rhythm disorders such as jet-lag or day-night cycle disorders, to control evulation, or in alteration of

This sequence is a new form of the melatonin receptor designated MEL-IAA, also known as Mel 1-c(alpha). The protein differs from previously known receptors by being 65 amino acids shorter and also having 2 different C-terminal amino acids. The protein is encoded by 2 different alleles (T70063-4) which differ in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mBNA. The coding sequence was isolated from cDNA derived from Xenopus skin RNA and amplified using the primers T7067-76. The nucleotide sequence encodes a 7 transmembrane receptor involved in cellular signalling. MEL-IAA has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular scene house the same protein of the protein sequence and transmembrane inhibit adenylyl cyclase, but both proteins can modulate intracellular scene and the same protein of the protein sequence and the same protein that the same protein inhibitor of the same protein inhibitor of the protein sequence and the same protein that the same protein is the same protein of the same protein inhibitor of the same protein is a new form the same protein sequence and the same protein is the same protein in the same protein in the same protein is the same protein in the same protein in the same protein is the same protein in the same protein in the same protein in the same protein is the same protein in the same protein in the same protein in the same protein in the same protein is the same protein in the same protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Domain

                                                                                                                                                                                                                                                                                                                                                             melatonin, or specific antibodies, may be used as receptor agonists or receptor-antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally branding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   form of a ligand binding pocket. Phosphorylation sites in the C-tail may be involved in receptor regulation. Primers from the encoding DNA may be used for isolation of sheep, mouse and human

The protein differs from previously known receptors by being 65 amino acids shouted and also differs throughout the sequence by 6 amino acids. The protein is encoded by 2 different alleles (T7965-6) which differ in the 3 untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The coding sequence was isolated from CDNA derived from Xenopus skin BNA and amplified using the primers T7065-76. The nucleotide sequences a 7 transporbance primers transport involved in cellular signalling. MEL-1Ab has been shown to

```

transmembrane domain, and an NAXXY motif in transmembrane-7, rather than NPXXY. A CYILMS motif, which is a consensus site for cytochrome-o family beme binding, is present in both lb and la-type receptors. The N-terminus contains I consensus N-glycosylation site, Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-altagonists. Agonists may be used in therapy of circadian rhythm discribers such as jet-ing or lay-hight cycle discribers, to condition ovulation, or in alteration of reproductive cycles in swasonally breading animals. Autagonists may be used to control the

The sequence represents a novel human high-affinity melatonin-1b receptor (mol wt. 40,188), which is a membrane protein, coupled to quantife nucleotide kinding proteins (6 proteins), with 7 bydrophobic putative transmembrane domains. Single features of 1b receptors include an NRY motif downstream from the 3rd transmembrane with the 3rd transmembrane from the 3rd transme

Claim 10; Fig 6; 115pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 167;
Calininergic receptors are useful as biological and pharmocological research tools and for production of antibodies. Agonists of such receptors are useful as analgesics. Probes directed against the game are useful for detecting expression of galaninergic receptors, for defecting generalities, for diagnosing neurological,
